linkedin.com/in/abdul-hakim-shaon-185817357 | github.com/abdulhakimshaon7-hash
Available from November 2026 | 3-month internship (up to 6 months)

AI Engineer Intern | DHL

Computer Science (Data Science) undergraduate with project experience in Python machine learning, Gemini API integration and Firebase backend development. Seeking to support practical AI prototypes, data preparation and automation in DHL IT Services.

EDUCATION

Bachelor of Computer Science (Data Science)

Monash University Malaysia | Year 2, Semester 2 (2026) | Expected graduation: 2027

TECHNICAL & RELEVANT SKILLS

Programming & data: Python, JavaScript/Node.js, R, SQL, Bash; pandas, NumPy, scikit-learn

AI & backend: Gemini API, prompt design, structured model outputs, Firebase Cloud Functions, Firestore, API/webhook integration

Visualization & tools: Vega-Lite, Tableau, Matplotlib, Git, Jupyter Notebook

SELECTED PROJECTS

LaporKita AI | Team SoulNet, KitaHack 2026

github.com/abdulhakimshaon7-hash/LaporKita-AI

- Built the backend and AI integration for a team-developed community reporting prototype using Node.js, Firebase Cloud Functions, Firestore, Gemini and Twilio.
- Integrated Gemini prompts to extract urgency, category, sentiment, location and suggested actions from complaint text into structured JSON, with retries and a manual-review fallback.
- Evaluated 94 labeled test records: saved results show 81.9% exact category agreement and 78.7% exact urgency agreement.

Student Performance Classification & Retail Clustering | Academic Project | 2025

- Prepared a 2,100-record student dataset, handled missing and invalid values, and engineered interaction and logarithmic features using pandas and NumPy.
- Compared SVM, decision tree and random forest classifiers on a stratified 630-record test set; saved results show 75.2%, 72.9% and 74.4% accuracy, respectively.
- Applied k-means to a 12,575-row retail transaction dataset and visualized price/quantity groups using Matplotlib.

Malaysia Palm Oil & Forest-Loss Data Story | Academic Project | 2026

asha0310-star.github.io/35174714_DV2/

- Built a single-page website with 15 Vega-Lite visualizations, including two geographic maps, exploring production, land use, tree-cover loss and trade.
- Used Python/pandas to reshape, aggregate and combine Our World in Data, Malaysian Palm Oil Board and Global Forest Watch data into chart-ready CSV files.
- Compared indexed production and planted-area trends and state tree-cover-loss patterns; documented that tree-cover loss is not equivalent to permanent deforestation or proof of palm-oil causation.
