Available from November 2026 | 3- or 6-month internship

Applied AI Engineer Intern | Ant International

Computer Science (Data Science) undergraduate with hands-on project experience connecting Node.js services, cloud functions, databases and generative AI APIs. Interested in building reliable backend features and validating AI-assisted software for fintech products.

EDUCATION

Bachelor of Computer Science (Data Science)

Monash University Malaysia | Year 2, Semester 2 (2026) | Expected graduation: 2027

TECHNICAL & RELEVANT SKILLS

Programming: JavaScript/Node.js, Python, SQL, R, Bash

Backend & data: Firebase Cloud Functions, Firestore, Twilio webhooks, Gemini API, Oracle SQL, relational modeling, normalization

Engineering tools: Git, Jupyter Notebook; debugging, API integration, structured output handling

SELECTED PROJECTS

LaporKita AI | Backend & API Integration | 2026

github.com/abdulhakimshaon7-hash/LaporKita-AI

- Built a Node.js/Firebase backend for a team-developed civic reporting prototype, connecting a Twilio WhatsApp webhook, Gemini API and Firestore.
- Processed incoming complaints into stored reports and structured AI analysis; implemented retry handling, fallback results, related-report grouping and alert workflows.
- Developed validation tooling to compare stored classifications with expected labels; saved evaluation records cover 94 test complaints.

Clear Away | Oracle Relational Database Design | 2026

- Translated a waste-collection case study into conceptual and logical data models and documented normalization from unnormalized data to third normal form.
- Produced an Oracle SQL schema with 14 tables and 16 foreign-key relationships, including primary-key, uniqueness and domain constraints.

Student Performance Classification & Retail Clustering | Academic Project | 2025

- Prepared a 2,100-record student dataset, handled missing and invalid values, and engineered interaction and logarithmic features using pandas and NumPy.
- Compared SVM, decision tree and random forest classifiers on a stratified 630-record test set; saved results show 75.2%, 72.9% and 74.4% accuracy, respectively.
- Applied k-means to a 12,575-row retail transaction dataset and visualized price/quantity groups using Matplotlib.
