Available from November 2026 | 6-month internship

Intern - Agentic AI, Software Development | DHL

Computer Science (Data Science) undergraduate with experience building an AI-assisted complaint-processing workflow using Gemini, Node.js and Firebase. Seeking to extend practical API integration and prompt-design skills into AI agent and software development work.

EDUCATION

Bachelor of Computer Science (Data Science)
Monash University Malaysia | Year 2, Semester 2 (2026) | Expected graduation: 2027

TECHNICAL & RELEVANT SKILLS

Programming: Python, JavaScript/Node.js, SQL, R, Bash

Applied AI: Gemini API, prompt design, structured JSON extraction, retry/fallback handling, keyword similarity grouping

Backend & tools: Firebase Cloud Functions, Firestore, Twilio webhooks, Oracle SQL, Git, Jupyter Notebook

SELECTED PROJECTS

LaporKita AI | Multi-step AI Processing Workflow | 2026
github.com/abdulhakimshaon7-hash/LaporKita-AI

- Built an AI-assisted sequence from WhatsApp intake to Gemini extraction, Firestore updates, authority alerts and related-report grouping using Node.js and Firebase.
- Designed prompts for structured complaint analysis and used category/keyword similarity to identify related reports; implemented retries and manual-review fallback outputs.
- Evaluated 94 labeled test records, with saved exact agreement of 81.9% for category and 78.7% for urgency.

Clear Away | Oracle Relational Database Design | 2026

- Translated a waste-collection case study into conceptual and logical data models and documented normalization from unnormalized data to third normal form.
- Produced an Oracle SQL schema with 14 tables and 16 foreign-key relationships, including primary-key, uniqueness and domain constraints.

Student Performance Classification & Retail Clustering | Academic Project | 2025

- Prepared a 2,100-record student dataset, handled missing and invalid values, and engineered interaction and logarithmic features using pandas and NumPy.
- Compared SVM, decision tree and random forest classifiers on a stratified 630-record test set; saved results show 75.2%, 72.9% and 74.4% accuracy, respectively.
- Applied k-means to a 12,575-row retail transaction dataset and visualized price/quantity groups using Matplotlib.
