Bachelor of Computer Science (Data Science) • Monash University Malaysia

PROFESSIONAL SUMMARY

Results-driven Year 2 Data Science student with hands-on experience in predictive analytics, machine learning, and large-scale data pipeline development. Demonstrated ability to process and analyse million-row datasets, build classification and regression models, and translate data insights into operational decisions. Seeking an internship at SHRDC Malaysian Smart Factory 4.0 to contribute to real-world Industry 4.0 and intelligent manufacturing initiatives.

EDUCATION

Bachelor of Computer Science (Data Science) | *Monash University Malaysia* Feb 2025 – Nov 2027 (Expected)

PROJECTS

LaporKita – Civic Issue Reporting Platform | *KitaHack 2026 Hackathon* 2026

- Co-developed a full-stack civic reporting platform in a 24-hour competitive hackathon, integrating geolocation, real-time data capture, and automated issue-routing logic
- Designed and implemented the backend data pipeline and analytics layer for issue aggregation and priority scoring
- Applied agentic workflow design principles: automated routing, condition-based decision logic, and real-time event handling

Large-Scale Data Processing & Analytics Pipeline | 2025

- Engineered end-to-end data pipeline processing a 1.47-million-row dataset in R with BASH scripting, covering ingestion, multi-stage transformation, aggregation, and quality validation
- Applied demand pattern analysis and anomaly detection techniques relevant to production scheduling and operational forecasting
- Delivered interactive Tableau dashboards visualising throughput trends, bottlenecks, and scheduling-relevant KPIs

Predictive Analytics & Machine Learning Models | 2025

- Built and evaluated supervised learning models in Python (SVM, k-means clustering, linear regression) for classification and predictive analytics tasks
- Implemented full ML pipeline: feature engineering, cross-validation, hyperparameter tuning, and performance benchmarking against real-world baselines

Sentiment Analysis – R Processing Pipeline | 2025

- Developed an end-to-end NLP pipeline in R to extract, clean, and quantify sentiment signals from large unstructured text datasets
- Produced structured summary reports suitable for data-driven operational and strategic decision-making

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, BASH

Machine Learning & AI: Supervised learning (SVM, regression, k-means), predictive modelling, feature engineering, model evaluation, NLP/sentiment analysis

Data Engineering & Analytics: Large-scale data processing (1.47M+ rows), data pipeline development, statistical analysis, demand forecasting, data visualisation (Tableau)

Industry 4.0 & Research Tools: SmartPLS, SPSS, PLS-SEM statistical modelling, scholarly research and manuscript drafting

Tools & Platforms: Git, Jupyter Notebook, Tableau, LaTeX

RESEARCH EXPERIENCE

Research Assistant (Pending Confirmation) | *School of IT, Monash University Malaysia* 2026

- Applied for RA position under Dr. Lillian Wang Yee Kiaw; scope includes PLS-SEM statistical analysis, SmartPLS modelling, and scholarly manuscript preparation for Q1/Q2 journal submission
- Demonstrates ability to engage with rigorous quantitative research methodologies independently

ACTIVITIES

- KitaHack 2026 – National hackathon; delivered functional product prototype
- Monash University Malaysia – Active participant in computing and technology student initiatives
