Available from November 2026 | 3- or 6-month internship

AI Engineer Intern | DHL

Computer Science (Data Science) undergraduate with project experience in Python machine learning, Gemini API integration and Firebase backend development. Seeking to support practical AI prototypes, data preparation and automation in DHL IT Services.

EDUCATION

Bachelor of Computer Science (Data Science)
Monash University Malaysia | Year 2, Semester 2 (2026) | Expected graduation: 2027

TECHNICAL & RELEVANT SKILLS

Programming & data: Python, JavaScript/Node.js, R, SQL, Bash; pandas, NumPy, scikit-learn

AI & backend: Gemini API, prompt design, structured model outputs, Firebase Cloud Functions, Firestore, API/webhook integration

Visualization & tools: Vega-Lite, Tableau, Matplotlib, Git, Jupyter Notebook

SELECTED PROJECTS

LaporKita AI | Team SoulNet, KitaHack 2026
github.com/abdulhakimshaon7-hash/LaporKita-AI

- Built the backend and AI integration for a team-developed community reporting prototype using Node.js, Firebase Cloud Functions, Firestore, Gemini and Twilio.
- Integrated Gemini prompts to extract urgency, category, sentiment, location and suggested actions from complaint text into structured JSON, with retries and a manual-review fallback.
- Implemented category-based keyword similarity grouping and alert workflows to help surface related community complaints.

Student Performance Classification & Retail Clustering | Academic Project

- Prepared a 2,100-record student dataset, handled missing and invalid values, and engineered interaction and logarithmic features using pandas and NumPy.
- Compared SVM, decision tree and random forest models with a stratified train/test split, confusion matrices, precision, recall and F1 scores; excluded GPA from predictors to avoid target leakage.
- Applied k-means to a 12,575-row retail transaction dataset and visualized price/quantity groups using Matplotlib.

Malaysia Palm Oil & Forest-Loss Data Story | Academic Project
asha0310-star.github.io/35174714_DV2/

- Built a single-page website with 15 Vega-Lite visualizations, including two geographic maps, exploring production, land use, tree-cover loss and trade.
- Used Python/pandas to reshape, aggregate and combine Our World in Data, Malaysian Palm Oil Board and Global Forest Watch data into chart-ready CSV files.
- Created indexed trends and state comparisons with annotations, tooltips and documented source limitations; published the project through GitHub Pages.

CERTIFICATIONS & ACTIVITIES

Prompt Design in Vertex AI - Google Cloud | Fundamentals of Deep Learning - NVIDIA

KitaHack 2026 participant, Team SoulNet | Google Developer Groups on Campus, Monash University Malaysia
